

Effective Project Scheduling

Roaring River Conference April 2011

Tasks, work, and resources—where the “rubber meets the road” for a project manager. Ultimately, all of the planning efforts around scope, budget, and time come together in the schedule. Yet, how well do we perform this effort? Do our schedules reflect reality or are they just another report?

This session identifies the core scheduling concepts and provides techniques for how to develop an accurate schedule. Participants learn how these concepts affect project estimates, discover ways to effectively allocate resources, and understand how to efficiently manage the project schedule. These workshops will provide proven strategies to develop a schedule that mitigates your projects’ risks and improves your ability to manage it during execution.

Learning Objectives

- Discover new project scheduling practices
- Practice techniques to overcome scheduling challenges
- Analyze and improve project schedules
- Develop a schedule evaluation
- Learn how to lead project scheduling efforts

Larry Winters is a Project Management Institute-certified Project Management Professional (PMP) with research interests in the areas of Business Strategy, Project Management, Project Risk Management, Virtual Teaming and “Green” Project Management. Larry is also a member of the National Speakers Association (NSA). He earned a Bachelor’s degree in Economics from the University of Arkansas at Little Rock and a Master’s degree in Information Systems from the University of Arkansas.
